@ From average rainfall for the month calculated upto 1935 (published in Fort St. George Gazette).

The unsettled conditions in the North Bay of Bengal during the end of last month concentrated into a deep depression on the 1st of this month. In the course of the next two days it intensified into a cyclonic storm in the North-west angle of the bay. Passing rapidly north west wards it crossed the Orissa coast about 4th and lay as a deep depression over Chota Nagpur on the 5th. It then receded and travelling in a north easterly direction filled up over East Bengal on 7th.

In connection with the depression wide spread rain occurred in Burma, coastal Bengal, Northeast India and along and near the track of the depression from 1st to 7th. Thunder storms were active in the West coast of the Peninsula during the first four days of the month and later in the Peninsula in general during the latter half of the month. Intermittent thunder showers were also reported in the interval, from Burma, Assam, North East India, Bombay, Deccan, North Madras coast, South east Madras and Malabar.
